DIGITUS KM Switch, USB

DS-16100**EAN 4016032256083**

This KM switch provides a user to control two computers and the associated display screens by moving the mouse cursor between the screens and switching without the panel select buttons. It is a great and simple way to work with two computers by using only one set of keyboard and mouse.

The KM Switch allows the user to view and access one computer while he is also able to view the desktop of the other "non-accessed" computer.

There are three possibilities to switch between the PCs: by hotkeys, hot mouse key function or by mouse moving.
